CONSTANT HEAD PERMEAMETER

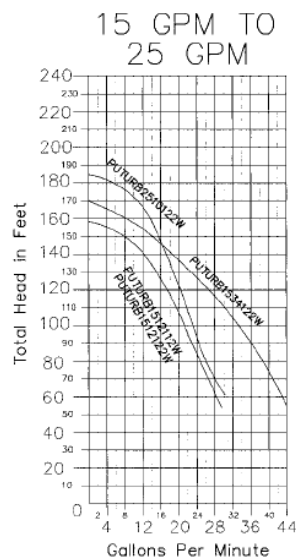

The Compact Constant Head Permeameter is an advanced portable piece of field equipment for measuring saturated hydraulic conductivity (Ksat) of the vadose (unsaturated) zone in the natural soil. The standard unit shown here can be used to measure Ksat from the soil surface to shallow depths. Depth of measurement can be increased to 4 meters using an other devices such as listed below.

CONSTANT HEAD PERMEAMETER

PERMEAMETER

This placement, slow rate, inverted constant head permeameter provides an alternative device to estimate the hydraulic conductivity of soils for shallow installations.
