### MONITOR TEMPERATURE FOR PROCESS CONTROL, OVER TEMPERATURE, OR FREEZING CONDITIONS

Monitor temperature and create an alarm set point to prevent out of range temperatures for temperature sensitive equipment or processes. The TAS (Temperature Alarm w/Sensor) retrofit control panel connects directly to any existing panel and works in conjunction with the general audible/visual alarm.

Each TAS unit includes a large digital display, a fuse for safety, an on/off switch, a temperature probe to be located within the equipment enclosure, and easy-to-follow, step-by-step schematics for installation and is backed by American Manufacturing's technical support staff.

#### **Easy Setup:**

1. Mount the 8"x6" TAS panel near the existing alarm control unit
2. Interconnect up to 4 wires between the two panels
3. Install the temperature probe in the equipment enclosure with the supplied cable and mounting hardware
4. Enter "failure" temperature via the display unit to initialize the alarm set point.
5. Finished

*Note: The TAS option is now available on all manufactured Perc-Rite® and American Automated Controls*

### FEATURES:

- QUICK EASY INSTALLATION
- CUSTOMIZEABLE TEMPERATURE SETTINGS
- HAS ITS OWN AUDIBLE ALARM TO DISTINGUISH FROM HIGH LEVEL
- PROBE FAIL INDICATOR

American Manufacturing will design and build most any onsite wastewater or water system controller that is typically used today. American Manufacturing becomes involved with the entire operation of the system whether potable water, process water, or wastewater. American has on-staff Professional Engineers, designers, soils scientists, and trained sales personnel with state-of-the-art experience in control systems.

Our objective is to provide the most practical, economical, and efficient control device for fluid handling. We inventory many standard application controls and are able to manufacture special application panels in a very timely manner due to our modular design and manufacturing methods.
