## ALARMS

### QUICK AND EASY INSTALLATION

#### STANDARD ALARM

The Tank Alarm "TA1" provides a versatile means of indicating an alarm condition in a water or wastewater system. The unit has an amber "Power On" light to indicate it is in service, and the unit is ready to sense a high-level condition (or a low-level condition by utilizing a normally closed float or contact). The Alarm condition provides a red light and audible alert. The audible alert may be turned off until the alarm condition is corrected. The unit is low voltage and U/L Listed.

All wiring and components are housed in the front insert module.

#### AUTO RESET ALARM

The Auto Reset Alarm A1-A & A4-AF is a desirable option for many installations. In the event of a pump failure, water will continue to rise in the tank and sound the alarm. The buzzer can be silenced by pushing the silence switch. Once the alarm condition has been corrected, the buzzer will automatically reset, making the system fully operational.
